MEDICAL MARIJUANA LAWS FOR PATIENTS

August 2017

Codebook

This codebook describes the variables in a dataset that examines variation in state laws regulating medical marijuana laws for patients. This dataset is longitudinal displaying laws effective as of January 1, 2014 through February 1, 2017. The jurisdictions selected for measurements are the 50 states and the District of Columbia.

There are six standard variables in every PDAPS dataset. They are:

ID:

An identification code generated by the MonQcle.

FIPS CODE:

The Federal Information Processing Standard (FIPS) codes are a standardized set of numeric codes issued by the National Institute of Standards and Technology to ensure uniform identification of geographic entities through all federal government agencies.

JURISDICTION:

This is a dropdown selection in each coding form. It includes the jurisdictions coded in the dataset.

EFFECTIVE DATE:

This date (MM/DD/YYYY) is the most recent effective date of the legal text captured for this place. The effective date represents the date the policy coded was put into effect. This dataset began as a cross-sectional study intended to capture present day law as of January 1, 2014. The states' record effective date is the effective date of the most recent statute or regulation within the state record. Thus, there are laws within this dataset that were enacted prior to January 1, 2014, however they are still effective so they are included in the state record and assigned the appropriate states' record effective date.

VALID THROUGH DATE:

This date (MM/DD/YYYY) is the last date the policy was in effect as reflected by the legal text captured to code this policy.

LEGAL TEXT:

This is a text box that captures all legal text relevant to the coding questions. This will not download into Microsoft Excel.
